SUMMARY

Builder-minded Product Manager and Computer Science graduate who ships AI-native products end-to-end, from problem discovery through design, deployment, and iteration. Took a multi-tenant AI debt-collections platform from 0 to 1, defining and shipping voice and SMS negotiation agents and standing up the release, QA, and deployment systems from scratch. A repeat founder (e-commerce and a data science club) who cares as much about optimizing how work gets done, automating bottlenecks and tightening feedback loops, as about what gets built.

WHAT I'VE BUILT

MARS + ORCA, AI-Native Debt-Collections Platform *fiscor.ai* | Product Owner, 0 to 1

- Defined and shipped AI voice and SMS negotiation agents with concession-ladder logic, compliance gating, quiet-hours and consent enforcement, and human finalization, lifting collections contact rates.
- Architected multi-tenant isolation with row-level security, per-tenant managed secrets, and currency-aware config, letting a second tenant onboard with zero data crossover.
- Built the deployment pipeline from dev to production: staged rollouts, runbooks, feature-flag gating, paired database migrations, and seeded playground environments for demos and QA.

Loan Default Prediction Engine: *Solo build, deployed*

- Shipped an XGBoost risk-classification model behind a real-time Streamlit UI with SHAP explainability and KPI dashboards, reaching 99% accuracy and 1.00 recall.
- Wired GitHub and Colab pipelines for reproducible, scalable deployment into a financial use case.

Fitbit Behavioral Segmentation *Solo build, 1.3M rows*

- Processed 1.3M rows of minute-level activity, sleep, and heart-rate data in Python, ran K-Means to derive 4 customer **personas**, and built interactive Streamlit and Sigma dashboards for persona-based go-to-market.

Currency Detection, Computer Vision *Solo build*

- Built an Indian-currency denomination detector in MATLAB using a color-centroid mask approach, tuning image-processing steps to raise recognition accuracy.

Earlier builds (2021 to 2023): cyber-attack risk prediction in JMP, a COVID-19 tracking dashboard with regression-based forecasting, movie-data cleaning and Power BI visualization, and a modular supermarket billing system in C.

EXPERIENCE

Product Manager, fiscor.ai (USA) Jun 2025 to Present

- Own end-to-end product for a multi-tenant AI debt-collections SaaS across discovery, PRDs, roadmap, and sprint execution for a 15-person cross-functional team.
- Stood up release management from scratch: a two-week cadence, committed-vs-if-time scoping, and per-item done-when acceptance gates.
- Built QA from zero: a P0 to P4 triage board, a standing bug-hardening lane, and regression plus compliance test gates, shipping releases with **zero open critical or high defects**.

Product Manager, CRED (India) Jul 2022 to Jul 2023

- Drove engagement and retention initiatives for fintech products, contributing to a 22% lift in engagement, and cut funnel drop-off through A/B testing for an 18% conversion gain.
- Built SQL and Power BI dashboards that cut reporting turnaround by 35% and streamlined workflow automation for an operational-efficiency gain.

FOUNDER & LEADERSHIP

Salient Store, Co-Founder *E-commerce / Dropshipping* 2019

- Co-founded a Shopify store selling clothing and accessories at age 18, owning the technical build and day-to-day operations end-to-end.
- Drove customer acquisition through Instagram Business ad campaigns and SEO, generating roughly 60,000 rupees in revenue across the store's 7 active months.

AlgoRhythm, Co-Founder, Data Science Club, DC-area Virginia Tech 2024 to 2025

- Co-founded a graduate data science community operating under the Graduate Student Assembly.

Analytika (NMIMS University), Vice-President, Relations 2022 to 2023

- Led 3 departments across public, corporate, and marketing relations (about 45 students), ran 4 to 5 events reaching **300+ attendees**, and owned sponsor funding and event finances.

Graduate Student Assembly (Virginia Tech), Financial Chair Aug 2024 to Dec 2024

- Owned the budget and logistics for all GSA events across the semester, including multi-hundred-person cultural events.

Student Representative (TA-equivalent), NMIMS University 3 years

- Served as the liaison between students and faculty on assignments, grades, and feedback, and advised professors on student-engagement initiatives.

EDUCATION

M.S., Global Business Analytics, Virginia Tech 2025

B.S., Information Technology, Virginia Tech 2024

B.Tech, Computer Science (Data Science), NMIMS University 2023

SKILLS

Product: Lifecycle Ownership, Discovery, PRDs, Roadmapping, Prioritization, A/B Testing, KPI Analytics, User Research

AI / ML: AI Voice and SMS Agents, LLM Workflows, Hugging Face, Vector DBs (Pinecone, Weaviate, pgvector), XGBoost, SHAP

Technical: Python, SQL, ETL, Streamlit, Airflow, AWS, GCP, Supabase, Databricks, GitHub, Feature Flags, MATLAB, C

Analytics / BI: Power BI, Tableau, Sigma, Google Analytics, Excel and VBA

CERTIFICATIONS

AWS Cloud Practitioner | Google Analytics | McKinsey Forward Program | Base SAS and Visual Analytics
